# Music Quiz

## Game Overview.

- This game asks users to work out the title and artist of a song by presenting them with just the first initial of each word of the title and artist. Other characters are represented using an asterisk.

For example:
"C******* L*** by K********" is "Computer Love by Kraftwerk")

## Your Task.

- Create a CSV file to store the complete title and artist information.
- The program will need to:
    - Load the CSV file.
    - Choose a title and artist at random.
    - Substitute characters for asterisks.
    - Ask the user to enter their answer.
    - Tell the user if they are correct or not.

## Things to Consider.

- You will need to add enough titles to make the game playable.

## Planning and Tips.

- Decompose your problem into smaller tasks.
- For each smaller task, plan the algorithm on paper before writing code.
- To split a string into a list of individual words, investigate Python's `slice()` statement.

## Super Challenges.

- Ask the player multiple questions and keep their score.
- Add a 'help' option which completes random characters but reduces the maximum score for the question.
- Add a GUI which shows a photo of the artist.
